

VTC 1910
Palm-Sized Ruggedized Telematics Gateway
Powered by Intel Atom® Processor E3815

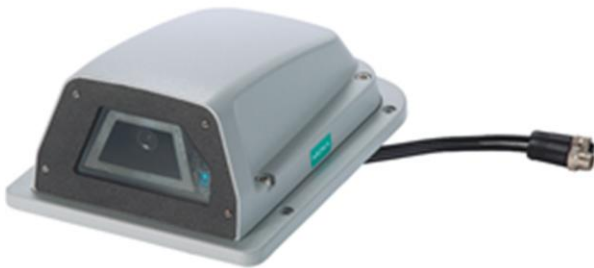

MAY 10, 2017

Vehicle Telematics Comes in a Small Package to Create Big Advancement in Fleet Management.

Featuring Intel Atom® processor E3815, the telematics gateway VTC 1910 is geared for data acquisition, edge computing, and network communication.

Integrated with onboard systems, the VTC 1910 can extract vehicle telematics, perform preliminary analysis, and stream and act on results, allowing for anomaly alerts and real-time adjustments to optimize planning and operations for public transport services, commercial fleets and more.
